Hiring team

Senior Software Engineer

Propellerhead, Auckland

Dear hiring team,

I am applying for the Senior Software Engineer role in Auckland. I am a senior engineer in Singapore with nine years in React and TypeScript, now taking more of the stack around them. I saw you welcome people who are planning to relocate, and I am one of those.

Recent work: after two UBS banking platforms merged I led the React/TypeScript micro-frontend move from Create React App Module Federation to Vite, and shipped production UI on tax and document-expiry workflows in the first week on an unfamiliar codebase. At Ascenda I designed checkout and auto-redemption for a loyalty product used by bank and card partners, plus a Next.js self-serve so enterprise clients could launch their own branded experience. At Zühlke I built a one-command Node CLI and Docker local stack so a GIC platform could run on a laptop. I also work in Node and Python, and I have been in Java/Kotlin-adjacent teams without claiming I am a backend specialist.

I mentor on testing and craft. I am based in Singapore and ready to relocate to Auckland. Happy to work through the usual accredited-employer visa steps with you once we are talking.

Thank you for considering the application.

Yours sincerely,

Dhrubajit Paul Chowdhury
