Hiring team

Senior Software Engineer (Front end)

Air New Zealand, Auckland

Dear hiring team,

I am applying for the Senior Software Engineer (Front end) role. I am a senior engineer in Singapore with nine years building React and TypeScript products, now taking more of the stack around them. I want to do that work on Air New Zealand's digital platforms in Auckland.

The closest recent work is a UBS client-onboarding and compliance programme after two banking platforms merged. I led the React/TypeScript micro-frontend move from Create React App Module Federation to Vite, which cut build times and tightened the local loop, and I shipped production UI on tax and document-expiry workflows in the first week on an unfamiliar codebase. Before that, at Ascenda, I designed checkout and auto-redemption for a loyalty product used by bank and card partners, and a Next.js self-serve so enterprise clients could launch their own branded redemption experience. At Zühlke I built a one-command Node CLI and Docker local stack so a GIC platform could run on a laptop instead of a shared UAT.

I mentor on testing and craft, speak at regional frontend events, and I am used to regulated domains where the UI is not a skin on top of someone else's system. I am based in Singapore and ready to relocate to Auckland for this role. Happy to work through the usual accredited-employer visa steps with you once we are talking.

Thank you for considering the application. I would welcome a conversation about the digital platforms team.

Yours sincerely,

Dhrubajit Paul Chowdhury
